More reasons to love your laminates!

Prism TFL Designs with Built-in Protection Against Mold and Mildew

1 ARAUCO’s proprietary InCopper™ antimicrobial technology is specially formulated to protect against fungal growth like mold and mildew on the surface of the panel. It inhibits the growth of bacterial odors, and is treated to resist deterioration and stain caused by mold fungus and mildew.

2 Antimicrobial protection lasts the lifetime of the panel surface.

3 InCopper is registered by the EPA (Reg-93650) and proven as an effective fungicide and antimicrobial agent. (Note that this product does not protect the users or others against bacteria, viruses, germs or other disease-causing organisms.)

Copper-based protection does not dissipate, diminish or lose effectiveness over the lifetime of the intact surface.

Treated paper is impregnated with InCopper prior to lamination.
